SAT Solver Competitions

Goals

- Compilation of new challenging benchmarks
- Promotion of SAT solvers and their development
- Evaluation of current state-of-the-art solvers (“snapshot”)

Long tradition, starting from 1992

- 3 competitions in the 90s (1992,1993, 1996)
- 14 SAT Competitions (2002–)
- 5 SAT Races (2006, 2008, 2010, 2015, 2019)
- 1 SAT Challenge (2012)

Key rules

- Certified results of unsatisfiability using DRAT proof logging
 - ▶ Instance is “not solved” if proof checker finds inconsistency in proof
- Disqualification of buggy solvers
 - ▶ Producing an incorrect model
 - ▶ Report UNSAT on a known satisfiable instance
- Mandatory solver descriptions + open source
- Ranking scheme: PAR-2
 - ▶ Favors solvers that are faster (not only count solved instances)
- BYOB (Bring Your Own Benchmarks)
 - ▶ At most 20 instances per participant are used

What is New This Year

Crypto Track

- Second Instantiation of *Application Track*
- Introduced in SAT Competition 2020 (Planning Track)
- Application Tracks are evaluated on an extra set of instances stemming from a single application domain

Special Innovation Price in Main Track

- Solver won *no price* in Main, Crypto, SAT or UNSAT Track
- Solver is part of the best performing k -Portfolio
- Portfolio of size k with lowest PAR-2 score of its VBS
- Determined smallest k to find such a solver

Benchmark Instance Selection I

Submissions

- 1091 instance submitted
- 952 after “hardness” filter (solved by Minisat within one minute)
 - ▶ 352 instances for Main Track
 - ▶ 600 instances for Crypto Track

Main Selection: 400 instances

139 SAT, 139 UNSAT, 122 UNKNOWN

- 300 new instances (24 instance families)

Benchmark Instance Selection II

Submissions

- 85 old instances (14 authors)

Tracks part 1

- Main (Sequential) Track (48 solvers)
 - ▶ 400 benchmarks, a combination of “application” and “crafted”
 - ▶ 5,000 sec limit for solving and 40,000 sec for proof checking
 - ▶ Solvers run on a single core
 - ▶ UNSAT proof logging required
- Parallel Track (10 solvers)
 - ▶ The same 400 benchmarks from Main track
 - ▶ 5,000 sec limit for solving
 - ▶ 1 AWS m4.16xlarge: 64 virtual CPU cores, 256GB RAM
- Cloud Track (6 solvers)
 - ▶ The same 400 benchmarks from Main track
 - ▶ 1,000 sec limit for solving
 - ▶ 100 AWS m4.4xlarge: total of 1600 virtual CPU cores

Tracks part 2

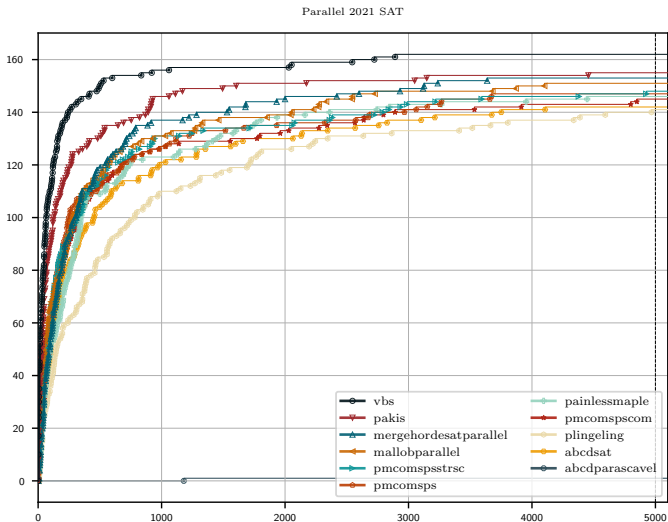

- CaDiCaL Hack Track (5 solvers)
 - ▶ 400 benchmarks, a combination of “application” and “crafted”
 - ▶ 5,000 sec limit for solving and 40,000 sec for proof checking
 - ▶ Solvers run on a single core
 - ▶ UNSAT proof logging required
- Crypto Track (48 solvers)
 - ▶ 200 benchmarks, all coming from cryptographic problems
 - ▶ 5,000 sec limit for solving
- No-Limit Track (52 solvers, superset of Main track participants)
 - ▶ 300 brand new benchmarks (subset of the Main Track benchmarks)
 - ▶ 5,000 sec limit for solving
 - ▶ Most of the solvers provided source codes and models, but not all
 - ▶ No awards: top solvers were open source and proof producing
